

# Project : ArtToken (NFTs)

## Objectives

ArtToken is a Solidity smart contract–based platform that allows artists to create and sell unique digital artwork on the Ethereum blockchain.

Using the ERC721 standard,  
each artwork is given a  
unique token ID that can be  
bought and sold on the  
platform.

Artists can create artwork listings with details such as name, description, and price, and buyers can purchase the artwork by sending cryptocurrency directly to the artist.

The platform provides a transparent, secure, and decentralized environment for artists to monetize their work without intermediaries.
